This report for the SRS is designed to aid in diagnosis and treatment planning. The user should be familiar with the materials presented in the SRS Manual (WPS Product No. W-399B). No diagnostic or treatment decisions should be made solely on the basis of this report without confirming information from independent sources.

## SRS Total Score Results

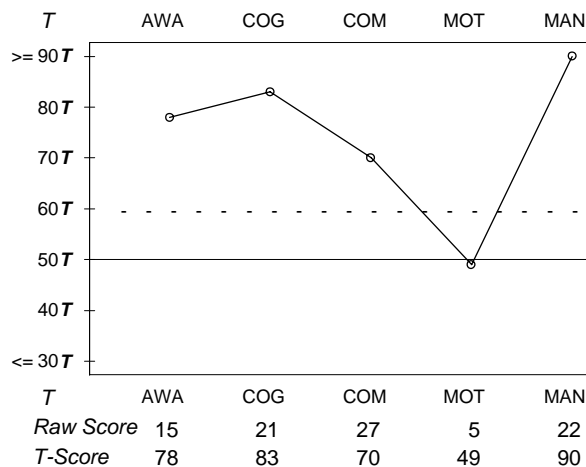

**Total Raw Score: 90**  
**T-Score: 77**

>=76T: Severe    60T-75T: Mild to Moderate    <=59T: Normal

## Total Score Discussion

**T-score 76T or higher.** The result is in the severe range. Scores in this range are strongly associated with a clinical diagnosis of Autistic Disorder, Asperger's Disorder, or more severe cases of PDD-NOS. They suggest a severe interference in everyday social interactions. In most clinical and educational settings, SRS scores at or above 76T from two separate informants provides very strong evidence of the presence of a clinically diagnosable autism spectrum condition.

## Treatment Subscale Results

AWA = Social Awareness    MOT = Social Motivation  
 COG = Social Cognition    MAN = Autistic Mannerisms  
 COM = Social Communication
